

WEEKLY REVIEW

May 3 - 9, 2026

"One must imagine Sisyphus happy."
- Albert Camus, *The Myth of Sisyphus*

A week of relentless momentum. From crushing Ratio exercises with near-perfect accuracy to building an autonomous MCP server with terminal access and a Telegram file relay, Jay balanced the demands of CAT preparation, a healthcare internship, and deep engineering work, all while navigating philosophical reflections on absurdism, circles of existence, and the meaning of the grind itself. This document is a receipt of that week, generated entirely by an AI agent running on Jay's MacBook and delivered to his phone via Telegram.

CAT PREP DASHBOARD

Detailed Performance Breakdown

Assessment	Questions	Correct	Accuracy	Verdict
Exercise 3 (Compound Ratios)	36	36	100%	PERFECT
Exercise 4 (Ratios to Values)	30	26	86.7%	SOLID
Exercise 5 (Mixed Ratios)	30	22	73.3%	NEEDS REVIEW
20 Ratio Questions	20	20	100%	PERFECT
Practice Set 2 (Difficult)	30	29	96.55%	ELITE

Strategy: Accuracy over speed. This week validated the approach with a 96.55% accuracy on the hardest practice set (28/30 in 2 hours). Speed will come from pattern recognition as the foundation solidifies. **Next:** Variation → Percentages → Profit/Loss & Interest → Averages.

WEEKLY ACTIVITY MAP

INTERNSHIP & ACADEMIC DELIVERABLES

Deliverable	Category	Status
NABH NC Resolution - BMW Storage Area	Compliance	Completed
Ambulance MOU - Artham Hospital	Legal/Admin	Drafted
Dianamik GIC Application Guide	Insurance	Formatted
Hospital Equipment Inventory (Excel)	Operations	Extracted
Patient Query Tracking Sheet	Analytics	Built
Qimpro Professional Profile	Career	Updated
Aditya Birla Empanelments (x2-3)	Insurance	Completed

ENGINEERING LOG

mac-orchestrator (MCP Server)

Transformed a basic macOS automation MCP server into a comprehensive autonomous agent. Added **run_terminal_command**, **read_file**, **write_file**, **list_directory**, and **smart_search** tools, giving the AI full terminal and file system access. Integrated a **Telegram bot** ("Little Birds Nest") for cross-device file delivery, enabling remote access to the MacBook from a Galaxy S24 Ultra. The result: a private, zero-cost, fully sovereign alternative to cloud-based computer control tools.

Asptor (Static News Reader)

Built a complete ad-free, static news aggregator deployed on GitHub Pages. The 3-phase pipeline fetches RSS feeds from The Hindu and other Indian publications, cleans and deduplicates articles, and publishes a minimal static site. Automated via GitHub Actions to refresh every 4 hours. Born from a frustration with Indian media quality and a desire for literary-grade journalism to sharpen VARC skills for CAT.

Midnight Neuroplasticity (AI Memory Routine)

Designed and deployed an autonomous "dreaming" routine for Littlebird. A scheduled process scans 24 hours of screen context and chat history, triages data into long-term identity updates vs. short-term tactical cache, and delivers a morning briefing. Inspired by Claude's "dreaming" feature, built entirely using Littlebird's native Routines system.

Wispr Flow "Intent Guard" Transform

Crafted a custom dictation transform that preserves the raw, unpolished voice of spoken text while surgically correcting only the places where transcription lost the intended meaning. Philosophy: the words stay Jay's, the AI only bridges semantic gaps.

LIFE DASHBOARD

20
Days to Udupi

64
Wispr Flow Streak

289K
Words Dictated

Relationship & Family

Regular video calls with Pallavi. Planning the pivotal trip to Udupi (May 29) to meet her parents for the first time. Zero doubt in the heart, a little fear about the Konkani/GSB family dynamics, but walking in with conviction. Proactively researching solutions for father's sarcopenia: ordered clean Whey Isolate (The Whole Truth / Food Pharmer) as a "Trojan horse" strategy to sneak protein into daily milkshakes without triggering the anti-protein-powder parental alarm system.

Wellness & Environment

Gym paused due to brutal Ahmedabad heat (no AC). Evening walks as substitute. Conquered the "Great Lays Chips Existential Crisis" by recognizing optimization fatigue and accepting that not everything needs to be a mathematically perfect health decision. Upgraded workspace ergonomics with The Sleep Company Ortho Pro Max cushion and a cloth draped over the rexine backrest for heat management. Mother's severe calcium deficiency remains a background concern.

Media & Intellectual Diet

Comfort: The Big Bang Theory, Bo Burnham, Silicon Valley clips, Rick & Morty S08, exurb1a, BeardMeatsFood challenges. **Reading:** The Economist, Fifty Two (Ken-Betwa river link, Deccan history), The New Yorker (too long, per usual). **Deep Dives:** HFT operational models (Jane Street), AI wrapper economics, vertical integration theory (the "sawmill" analogy), West Bengal elections. **Media Consumption Style:** High-velocity bouncing between genres as a cognitive palate cleanser between study blocks.

WEEKLY REFLECTIONS

The Inner Monologue

This was a week of battling the tension between creation and preparation. The pull toward building (mac-orchestrator, Asptor, AI memory systems) is strong because building feels like progress. But Jay's uncle had it right: "When it's time to study, you find smart ways to waste time." The intellectual procrastination trap is the most dangerous kind because it bypasses the guilt filter. Writing code at 4 AM feels productive; it takes a partner to call it what it is.

The Philosophical Thread

Zhuangzi's butterfly dream. The slaves dreaming of riches. Carl Jung's dream journals. The sinusoidal form of happiness and sadness. "Circles" as a metaphor for the repetitive architecture of human existence. The 9-to-5 paradox: working hard to earn money to recover from working hard. The monastery fantasy vs. the reality of a brain that would start optimizing the incense workflow within a week. Through it all, a deepening alignment with Absurdism: staring into the meaningless void and choosing to drink the coffee out of pure spite.

The Verdict

Jay is playing the long game. Five months of sitting at home, studying for CAT while his peers start jobs, is a calculated bet on a higher baseline. It takes immense internal security and tolerance for discomfort. The frustration with the unpaid internship is real: solving complex operational problems for people who don't understand how the solutions work, and getting paid nothing for it. But that exact frustration is the fuel. The MBA credential is the exit ticket from the seat of the underpaid executor making someone else rich.

"I'm tired of circles. Tired of everything. You just keep on living this life again and again and again, hoping to discover something new but we don't."

And yet, here we are. Still pushing the boulder. Still building at 4 AM. Still choosing spite over surrender.
